I JORNADAS SOBRE EL CULTIVO DE ALMENDRO Y PISTACHO

6 al 7 de Septiembre de 2016

Escuela Politécnica Superior de Huesca

Programa

Martes, día 6 de septiembre Escuela Politécnica Superior de Huesca

9:00 Recepción y entrega de documentación

9:15 Inauguración. Alfredo Serreta Oliván (Director de la sede UIMP-Pirineos)

9:30 Situación a nivel mundial del mercado de los frutos secos.

Rafael García (Director comercial de IMPORTACO)

10:15 La mejora genética del almendro del CITA de Aragón como respuesta a las necesidades del sector español.

Rafael Socías (Centro Investigación y Tecnología Agroalimentaria de Aragón)

11:00 Pausa-café

11:30 La revolución del almendro: Nuevos modelos agronómicos.

Xavier Miarnau (Institut de Recerca iTecnologia Agroalimentaria) Cataluña

12:15 Mapa de suelos y diseño eficiente de riego y fertilización. El ejemplo australiano.

Xavier Rius (AGROMILLORA IBERIA)

13:30 Pausa

16:00 Tendencias y problemática de patrones para almendro.

María Ángeles Moreno (CSIC, E E Aula Dei, Zaragoza)

16:45 El cultivo del pistacho. Interés y posibilidades en España.

Antonio Alcolea (Ingeniero Técnico, especialista en pistacho)

Moderador José Casanova Gascón (EPS Huesca)

Miércoles, día 7 de Septiembre

Visita a Fincas (transporte por medio propios)

9:30 Visita a la finca de almendro en alta densidad "Mas de Félis", La Granja d'Escarp (Lleida).

Josep Maria Roca (Asesor y propietario de la finca Mas de Félis).

Coordenadas: 41,412109 N 0,376212 E

Moderador y presenta: Antonio Poblador Vivero de Abel de Caspe.

11:30 Visita a la finca de almendro semi-intensiva "Finca del Moro" Mequinenza (Zaragoza)

Raimundo Ráfales (Frutos secos Ráfales) Coordinadas: 41,286447 N 0,156933 E

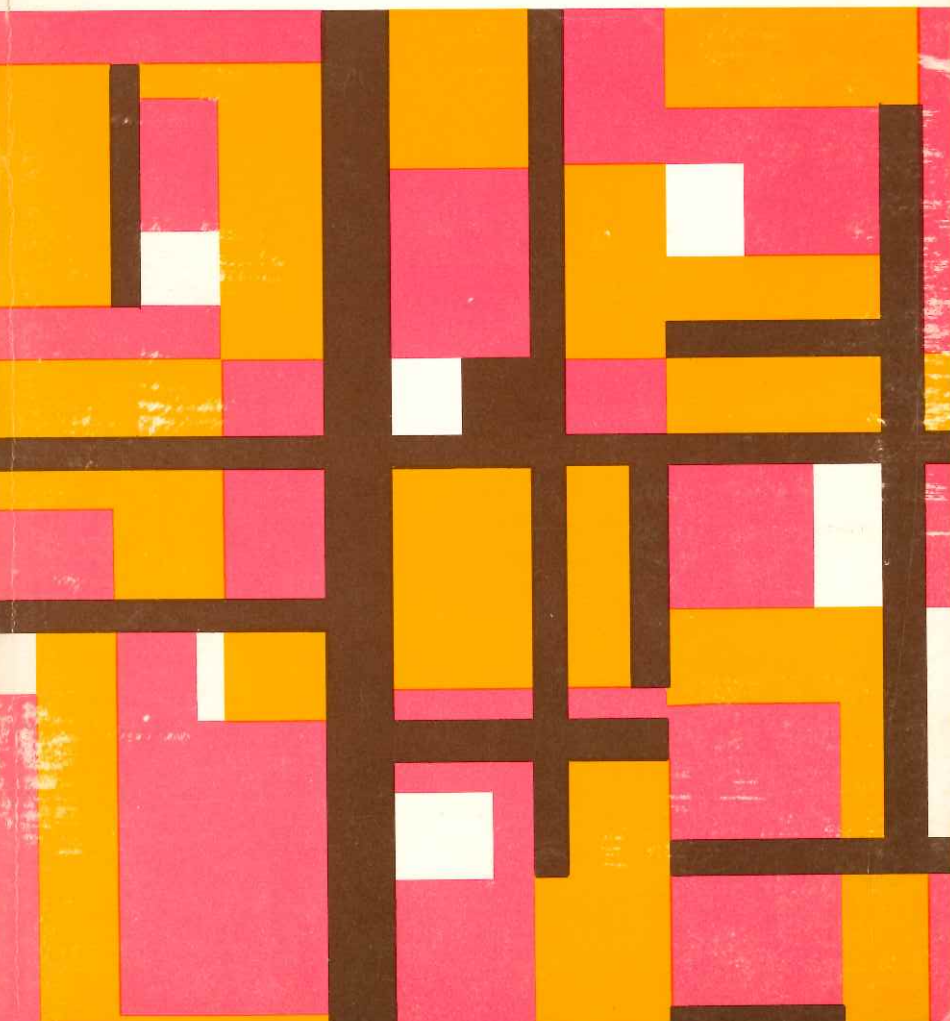

Moderador y presenta: José Casanova Gascón

Escuela Politécnica Superior de Huesca

The Strategy of Economic Development

ALBERT O. HIRSCHMAN

CONTENTS

	<i>Page</i>
Preface	v
1. Preliminary Explorations	1
The Search for the Primum Mobile	1
The Importance of Being a Latecomer	7
The Idea of Change as an Obstacle to Change	11
The group-focused image of change. The ego-focused image of change. Exaggerated expectations and personalized liquidity preference.	
The Need for Inducement Mechanisms	24
2. Growth Models and Development Processes	29
The Economics of Growth—Help or Hindrance?	29
Explaining Investment Activity	33
The Ability to Invest	35
The Complementarity Effect of Investment	40
The Forces Corroding Development	44
3. Balanced Growth: A Critique	50
Is Balance in Demand Required?	50
The Paradox of the Internalization Doctrine	55
Different Types of Internalization and Their Effect on Growth	57
4. Unbalanced Growth: An Espousal	62
Is Balance in Supply Required?	62
Development as a Chain of Disequilibria	65
A Definition of Induced Investment	70
Some Related Points of View	73
5. Investment Choices and Strategies	76
Efficient Sequences versus Investment Criteria	76
Social Overhead Capital (SOC) versus Directly Productive Activities (DPA)	83
Definitions and biases. Development via shortage and via excess capacity of SOC. Suitability of the various sequences. Limits to development via SOC shortage.	

CONTENTS

6. Interdependence and Industrialization	98
Backward and Forward Linkage Defined	98
A Mental Experiment	104
Backward Linkage at Work	109
A Model of Capital Formation Based on Backward Linkage	113
Combining Backward and Forward Linkage	116
7. Industrialization: Further Characteristic Aspects	120
The Role of Imports in Inducing Industrial Development	120
The Reason for Dualistic Development	125
8. Efficiency and Growth of the Individual Firm	133
The Need for Built-In Spurs	133
The Maintenance Problem and a Suggested Solution	139
Generalizing the Solution	143
Capital-Intensive Technology?	150
Production versus Administration Tasks	153
9. The Role of Disturbances	156
Inflation	156
Types of upward pressure on prices. The price-price spiral.	
Balanced growth and inflation.	166
Balance-of-Payments Pressures	
Supply imbalances and the demand for imports. The foreign	
exchange illusion. "Exportability" of fast-growing outputs as a	
condition of external balance. Growth-inducing effects of fluctua-	
tions in foreign exchange earnings.	
Population Pressures	176

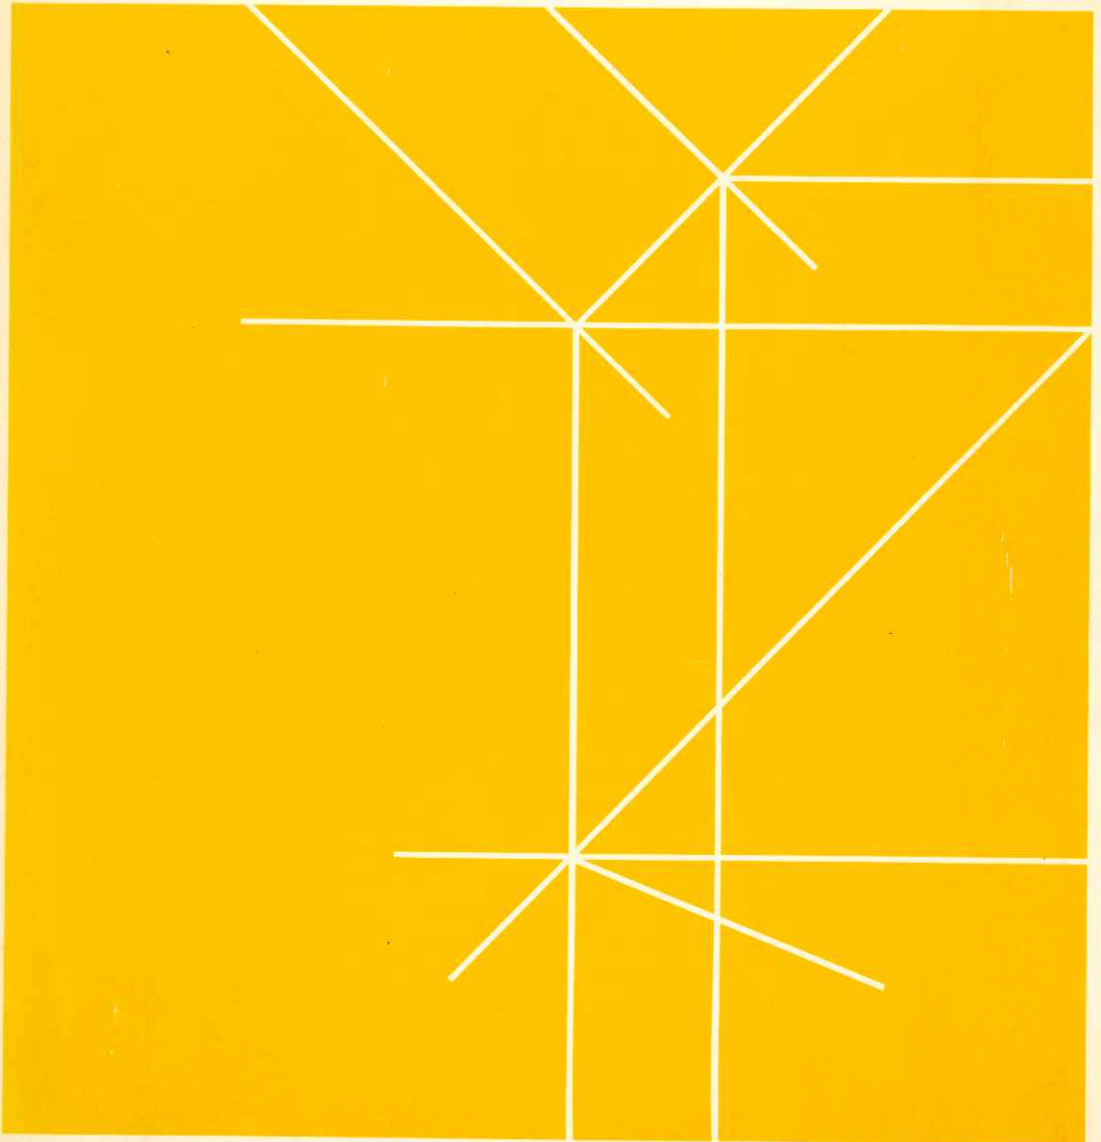

CONTENTS

10. Interregional and International Transmission of Economic Growth	183
"Growing Points" and Lagging Regions	183
Trickling-Down and Polarization Effects	187
The Regional Distribution of Public Investment	190
Interregional and International Transmission Compared	195
The case for separatism. The case for surrender of sovereignty.	
Optimal Institutional Arrangements	199
11. Conclusion: Functions of Government and Foreign Aid	202
The Two Functions of Government	202
The Role of Foreign Capital and Aid	205
The Argument in Perspective	208
Author Index	211
Subject Index	214

OXFORD
AT THE CLARENDON PRESS

CONTENTS

INTRODUCTION	
Plan of the work. A double inquiry (i) into value theory, comprising a study of the interrelations and mutual interactions of markets; (ii) into dynamic economics—the theory of capital and interest—the study of the economic system as a process in time.	
PART I	
THE THEORY OF SUBJECTIVE VALUE	
I. UTILITY AND PREFERENCE	11
1. Marshall's theory of utility. 2. Pareto and indifference curves. 3, 4. The ordinal character of utility. 5. Need for a theory consistently based upon ordinal utility. 6. Marginal rate of substitution. 7. Diminishing marginal rate of substitution. 8. Logical foundation of deductive economics. 9. Generalization to the case of many goods.	
II. THE LAW OF CONSUMER'S DEMAND	26
1. Marshall's deduction of the law. 2. Effects of income changes. 3. Effects of price changes. Income effects and substitution effects. 4. Extension of the concept of a <i>commodity</i> . 5. Market demand. 6. The Giffen case. 7. The supply curve.	
<i>Note to Chapter II.</i> CONSUMER'S SURPLUS	
	38
III. COMPLEMENTARITY	42
1. The Edgeworth-Pareto definition. 2. A revised definition. 3, 4, 5. Effects of a change in one price on the layout of expenditure in general. 6. The demand for a group of commodities.	
PART II	
GENERAL EQUILIBRIUM	
IV. THE GENERAL EQUILIBRIUM OF EXCHANGE	55
1. Range of application of the foregoing analysis. 2. The theory of exchange in its Walrasian form. 3. Determinateness of exchange equilibrium. 4. Reasons for apparent sterility of the Walrasian system.	
V. THE WORKING OF THE GENERAL EQUILIBRIUM SYSTEM	62
1. Laws of change and stability conditions. 2. Stability of simple exchange. 3. Stability of multiple exchange. Perfect and imperfect stability. 4, 5. Conditions for stability in multiple exchange. 6. The working of a system of multiple exchange. 7. Elasticities of supply and demand (all secondary repercussions allowed for).	

VI. THE EQUILIBRIUM OF THE FIRM	78
1. Parallelism between the theory of subjective value and the theory of the firm. 2. Equilibrium conditions in a simple case. 3. The difficulty of increasing returns. 4. The solution by imperfect competition considered. 5. Many factors and many products.	
VII. TECHNICAL COMPLEMENTARITY AND TECHNICAL SUBSTITUTION	89
1. Effects of price changes on the equilibrium of the firm. 2. Substitution among factors. 3. Complementarity among factors. 4. The relation between factor and product. Regression. 5. The dominance of complementarity among factors alone, and among products alone. 6. The general case.	
VIII. THE GENERAL EQUILIBRIUM OF PRODUCTION	99
1. Synthesis of static equilibrium theory. 2. Determinateness of the extended equilibrium system. 3. Stability of the system. 4. Working of the system. 5, 6, 7. Some examples in the application of the general equilibrium method.	
<i>Note to Chapter VIII.</i> CONVENTIONAL OR RIGID PRICES	110

PART III

THE FOUNDATIONS OF DYNAMIC ECONOMICS

IX. THE METHOD OF ANALYSIS	115
1. Statics and dynamics. 2, 3. The traditional approaches: (i) the stationary state; (ii) Marshall's short and long periods. 4. Adaptation of Marshall's method. Fundamental notions of a general dynamic theory: (i) the week; 5. (ii) the plan; 6. (iii) expectations. 7. Preserving the essentials of static analysis.	
<i>Note to Chapter IX.</i> THE FORMATION OF PRICES	127
1. Marshall's theory of the formation of prices in temporary equilibrium. 2. The generalization of Marshall's theory needed for our purposes.	
X. EQUILIBRIUM AND DISEQUILIBRIUM	130
1, 2. Two senses of equilibrium. The economic system is always <i>in</i> temporary equilibrium, always more or less <i>out of</i> equilibrium over time. 3. Causes of disequilibrium. 4. Forward trading as a means of overcoming some causes of disequilibrium. Its limitations. 5. Some model systems. The 'Spot Economy' and the 'Futures Economy'.	
XI. INTEREST	141
1. Commodity rates of interest and money rates. 2. The system of interest rates. Default risk. 3. Short rates and long rates. 4. The long-term market as a forward market in short loans. 5. Further models: the 'Spot Economy with short lending' and the 'Spot Economy with long lending'. 6. The short-term market as a forward market in long loans.	

XII. THE DETERMINATION OF THE RATE OF INTEREST	153
1. Recent controversy. 2. Some preliminary difficulties. 3, 4. Determination of the Rate of Interest under conditions represented by our various models. 5. The traditional dichotomy between 'real' and 'monetary' economics. 6. Mr. Keynes's approach.	
XIII. INTEREST AND MONEY	163
1. Money as a kind of security. 2. Substitution between money and bills. 3. Substitution between money and long-term securities. 4, 5. The chain of substitutes.	
XIV. INCOME	171
1. Elusiveness of the income concept. 2. Income in practice. 3, 4, 5. Successive approximations to the 'ideal' income concept. 6. Its ultimate unintelligibility. 7. Income <i>ex ante</i> and <i>ex post</i> . 8. Estimates of social income. Their true nature.	
<i>Notes to Chapter XIV.</i>	
A. SAVING AND INVESTMENT	181
Senses in which they are equal or unequal	
B. INTEREST AND THE CALCULATION OF INCOME	184
1. Interest and depreciation. 2. The average period of a stream of values. 3. The average period as a measure of <i>crescendo</i> or <i>diminuendo</i> .	

PART IV

THE WORKING OF THE DYNAMIC SYSTEM

XV. THE PLANNING OF PRODUCTION	191
1. Programme of Part IV. 2. The Austrian theory of capital. 3. The production plan. 4. What does the entrepreneur maximize? 5. Equilibrium of the production plan. 6. Stability of the production plan. Increasing returns reconsidered. 7. The average period of the plan.	
XVI. PRICES AND THE PRODUCTION PLAN	202
1. Parallel with Chapter VII above. 2. The static rules translated. 3. Effect of current prices on price-expectations. 4. Short and long periods. 5, 6. Substitution and complementarity over time. 7. The input lag.	
XVII. INTEREST AND THE PRODUCTION PLAN	213
1. Why interest changes are more difficult to deal with than price changes. 2. Particular changes in interest. 3. General changes in interest; the 'tilting' of the plan. 4. The average period as an index of tilting. 5. A fall in the rate of interest lengthens the average period. 6. The error of Böhm-Bawerk. 7. The impotence of interest.	

XVIII. SPENDING AND LENDING	227
1. The consumption plan. Weaknesses of the conception, and means to remedy them. 2. Equilibrium of the consumption plan. 3. Income effects in dynamic theory. 4, 5. Effects of (i) price, (ii) interest changes. 6. Two sorts of income effects.	
XIX. THE DEMAND FOR MONEY	237
1. Money as a durable consumers' good. 2. Money as a security. 3. The demand for money in stationary conditions. 4. The demand for money in changing conditions. 5. Demand for money from the firm.	
XX. THE TEMPORARY EQUILIBRIUM OF THE WHOLE SYSTEM. (I) ITS IMPERFECT STABILITY	245
1. Scope of temporary equilibrium theory. 2. The notion of imperfect stability recalled. 3. When expectations are inelastic, stability is maintained by substitution over time. 4. The critical case where such substitution ceases to be possible. Wicksell and the 'Cumulative Process'. 5. General proof of the imperfect stability of the system in the critical case. 6. Mr. Keynes's proof.	
XXI. THE TEMPORARY EQUILIBRIUM OF THE WHOLE SYSTEM. (II) POSSIBLE STABILIZERS	258
1. Our model threatens to exhibit a higher degree of instability than we find in fact; one must therefore seek for possible stabilizers. 2. Interest as a stabilizer. 3. Long and short rates. 4. The unreliability of interest. 5. Past contracts are a destabilizer. 6. Price rigidities. 7. Reasons for the particular importance of rigid wages. 8. Why should wages be rigid? 9. The sense of normal prices (i) as a cause of wage rigidities, (ii) as a stabilizer in its own right.	
XXII. THE TEMPORARY EQUILIBRIUM OF THE WHOLE SYSTEM. (III) THE LAWS OF ITS WORKING	273
1. Effects of hoarding, of saving, and of investment. 2, 3. Consequences with inelastic expectations. 4, 5. Consequences with elastic price-expectations. 6. Consequences with elastic interest-expectations.	
XXIII. THE ACCUMULATION OF CAPITAL	283
1. Beyond temporary equilibrium theory. 2. The depressing effect of capital accumulation. 3. Capital accumulation and distribution.	
<i>Note to Chapter XXIII. INCOME DURING A PROCESS OF CAPITAL ACCUMULATION</i>	
	292
XXIV. CONCLUSION—THE TRADE CYCLE	294
1. Some tentative reflections. 2. The boom as a process of capital accumulation. 3. Why the slump does not lead to complete collapse. 4. Inventions and innovations. 5. The secular problem.	

MATHEMATICAL APPENDIX

1. Introductory. 2. A fundamental mathematical proposition.	• 303
<i>Appendix to Chapter I.</i>	• 305
3. Equilibrium of the consumer. 4. Stability conditions. 5. The ordinal character of utility.	
<i>Appendix to Chapters II and III</i>	• 307
6. The effect on demand of an increase in income. 7. The effect of a change in price with constant income. 8. Properties of the substitution term. 9. Complementarity. 10. The demand for a group of goods. 11. The supply side. 12. Market demand.	
<i>Appendix to Chapter IV</i>	• 314
13. Equilibrium of exchange.	
<i>Appendix to Chapter V</i>	• 315
14, 15. The stability of exchange equilibrium. 16, 17. Effects of an increase in demand.	
<i>Appendix to Chapter VI</i>	• 319
18. Equilibrium of the firm. The conditions of equilibrium.	
<i>Appendix to Chapter VII</i>	• 320
19. Equilibrium of the firm. Effect of a change in price. 20. The tendency towards dominance of complementarity among factors.	
<i>Appendix to Chapter VIII</i>	• 323
21. The general equilibrium of production. 22. The stability of general equilibrium.	
<i>Appendix to Chapter XV</i>	• 325
23. The determination of the production plan.	
<i>Appendix to Chapter XVII</i>	• 326
24. The effect of interest on the production plan. 25. The average period of the plan.	

ADDITIONAL NOTES

A. The Generalized Law of Demand	• 329
B. The Imperfect Stability of the Temporary Equilibrium System	• 333
C. Professor Samuelson's Dynamic Theory	• 335

PART I

INTRODUCTION

CHAPTER 1.	<i>Econometrics without stochastic models</i>	3
	1. Introduction 2. Fitting by graph 3. Simple regression 4. Orthogonal regression 5. Deficiencies of deterministic methods 6. Notation 7. Multiple regression 8. Regression on two sets of variables 9. Comparison of different multiple regressions 10. Principal components 11. Orthogonal regression 12. Change of variables 13. Relationships between different regressions.	
CHAPTER 2.	<i>Economic models and statistical inference</i>	44
	1. Representation of economic phenomena 2. First example: supply and demand in a competitive market 3. Second example: elementary Keynesian model 4. Third example: a law of demand 5. Endogenous and exogenous variables 6. Causality and recursive models 7. Stochastic models 8. Models and structures 9. The problem of statistical inference 10. Identifiability 11. Bayesian principles of inference 12. Prior probability and the likelihood function 13. Classical principles of inference 14. Non-parametric models 15. Prediction 16. Errors of specification.	
CHAPTER 3.	<i>Linear model of simple regression</i>	80
	1. The model 2. Basic assumption 3. Other assumptions 4. The method of least squares 5. An important property of the method of least squares 6. Role of the assumption of normality 7. Properties of the method of least squares 8. Regressions in bivariate distributions 9. Prediction 10. Regression under Bayesian theory.	
CHAPTER 4.	<i>The consumption function. Discussion of an econometric problem.</i>	115
	1. Introduction 2. Regression and prediction on aggregate time series for the interwar period 3. A model with simultaneous equations 4. Short- and long-term effects 5. Individual consumption functions and aggregate consumption function 6. The macro-economic use of micro-economic data 7. Observed income and permanent income 8. Conclusion.	

PART 2

LINEAR ESTIMATION

CHAPTER 5.	<i>The general theory of linear estimation</i>	151
	1. The linear hypothesis 2. Concentration ellipsoid of a random vector 3. Linear estimators 4. Vectors and linear manifolds conjugate with respect to a concentration ellipsoid 5. Generalization of the method of least squares 6. Applications 7. The assumption of normality 8. A test of an important hypothesis 9. Optimal properties of the method of least squares 10. Historical note.	
	APPENDIX 1. <i>Analytic treatment of the Gauss-Markov theorem</i>	188
	APPENDIX 2. <i>Some rules of matrix calculus</i>	196
CHAPTER 6.	<i>Multiple regressions</i>	201
	1. The basic model 2. Multiple regressions and linear estimation 3. The method of least squares 4. Calculation of the estimate and its concentration ellipsoid 5. Applications 6. The effects of multicollinearity 7. Normal distribution of the errors 8. Asymptotic properties 9. Tests and confidence regions 10. Prediction of the endogenous variables 11. Bayesian theory.	
	APPENDIX. <i>The central limit problem</i>	250
CHAPTER 7.	<i>Analysis of variance and covariance</i>	254
	1. Introduction 2. Analysis of variance in the general linear model 3. Successive hypotheses 4. Orthogonal hypotheses 5. Hypotheses relating to simple regression 6. The choice of exogenous variables in multiple regressions 7. Analysis of variance for classified observations 8. Analysis of covariance 9. Multivariate analysis.	
CHAPTER 8.	<i>Supplementary remarks</i>	280
	1. Dummy exogenous variables 2. Regressions on grouped data 3. The simultaneous use of several samples 4. A general linear model and the case of simultaneous regressions 5. Incorrect specification of the distribution of errors 6. Incorrect specification of the relations.	

PART 3

TWO IMPORTANT STOCHASTIC MODELS

CHAPTER 9.	<i>Non-linear models with additive errors</i>	325
	1. General remarks 2. Asymptotic theory of non-linear regression 3. Normal errors and maximum likelihood estimators 4. Computation of a non-linear	

regression 5. Linear models with analytic constraints 6. An example 7. Confidence regions for models with constraints 8. Constraints expressed by linear inequalities.

APPENDIX. *Some properties of convergence in probability* 369

CHAPTER 10. *Linear models with errors in variables* 374

1. Introduction 2. Notation and assumptions 3. Errors in variables and least squares regression 4. Weighted regression 5. Properties of the weighted regression 6. Weighted regression and covariance of the errors 7. Instrumental variables 8. Identification and specification of the model 9. Grouping the data 10. Historical note.

PART 4

FITTING TIME SERIES

CHAPTER 11. *Introduction to stochastic processes* 415

1. Time dependence in econometric models 2. Random variables and functions 3. Stationary processes 4. Spectral representation 5. Moving averages 6. Autoregressive processes and harmonic processes 7. Linear representation 8. Prediction in stationary processes 9. Ergodicity.

CHAPTER 12. *Statistical analysis of time series* 440

1. Introduction 2. Principal characteristics of a series 3. Non-parametric tests of independence 4. Tests on second-order moments 5. Tests of independence on the periodogram 6. Estimation of the correlogram 7. Estimation of the spectrum of a stationary process 8. Parametric decomposition of a time series 9. Linear filters for the decomposition of time series 10. Spectral analysis of non-stationary series 11. What series should we use for econometric estimation? 12. Spectral investigation of the dependences among series.

CHAPTER 13. *Serial correlation of errors in regression models* . . . 504

1. Serial correlation of errors 2. Tests of independence of the errors 3. Asymptotic properties of the regressions 4. The process of the errors and characteristics of the residuals 5. Variances of the estimates and tests of hypotheses 6. Efficiency of the method of least squares 7. Estimation in models with correlated errors 8. Prediction in models with serially correlated errors.

CHAPTER 14.	<i>Autoregressive models</i>	538
	1. Lagged endogenous variables in economic models 2. Asymptotic properties of the method of least squares 3. Least squares fitting in small samples 4. Prediction 5. Serial correlation of errors and least squares fitting 6. Various methods for treating serial correlation of the errors.	
CHAPTER 15.	<i>Distributed lag models</i>	570
	1. Introduction 2. Distributed lag models in econometrics 3. Assumptions about the coefficients of the model 4. Direct estimation by linear and non-linear regressions 5. Least squares fitting of the autoregressive form 6. Other methods of estimation for the autoregressive form.	
PART 5		
SIMULTANEOUS EQUATION MODELS		
CHAPTER 16.	<i>Simultaneous equation models in econometrics</i>	597
	1. Structural equations and reduced equations 2. Demand and supply. Identification problems 3. Estimation of demand laws 4. Recursive models 5. Structural equations and theoretical regressions 6. Estimation of production functions 7. Price-elasticities in international trade.	
CHAPTER 17.	<i>Estimation problems illustrated by some examples</i>	623
	1. Indirect regression 2. Restrictions on the distribution of the errors 3. Estimation of an equation in an overidentified model 4. Regressions in recursive models.	
CHAPTER 18.	<i>Identification</i>	645
	1. The structural form 2. The reduced form 3. Definitions 4. The case where the restrictions do not affect the errors 5. Linear restrictions on the coefficients of the same equation. An identifiability criterion 6. An overidentification criterion 7. Generalizations.	
CHAPTER 19.	<i>General estimation methods in models with several equations</i>	668
	1. Structural form and reduced form 2. Simple models 3. Minimum distance estimators and quasi-maximum likelihood estimators 4. Restrictions on the covariance matrix of the errors 5. Recursive models 6. Computation methods for models containing only exclusion restrictions.	

CHAPTER 20. <i>Estimation of an equation in a simultaneous equation model</i>	692
1. The principle of limited information estimates 2. The minimum distance estimator of an equation with no exogenous variable 3. The Cowles Commission method 4. Two-stage least squares 5. Instrumental variables 6. Principal components of the exogenous variables 7. Distributions in small samples.

ECONOMIC THEORY
AND
OPERATIONS ANALYSIS

Third Edition

Juid Miguel Albizu
February -72
Newcastle

Prentice-Hall, Inc. Englewood Cliffs, New Jersey

CONTENTS

PREFACES	x <i>i</i>
PART 1 ANALYTIC TOOLS OF OPTIMIZATION	1
1 Optimization and an Example from Inventory Analysis	3
1. Optimization—a Basic Viewpoint. 2. Optimality Analysis in Operations Research. 3. The Role of Optimality in Economic Analysis. 4. Illustration: A Simple Inventory Problem. 5. Determination of the Cost Relationship. 6. The Optimality Calculation.	
2 Some Elementary Mathematics	12
1. Functions. 2. Slope. 3. Linear and Other Simple Equations. 4. Exponents: Definitions and Elementary Rules of Manipulation. 5. Logarithms. 6. Σ Notation.	
3 Marginal Analysis	21
1. Marginal Reasoning and the Logic of Decision-Making. 2. Theorems on Resource Allocation. 3. Totals, Averages, and Marginals: Their Arithmetic Relationships. 4. Geometry of Marginal Analysis: Total x Curves. 5. Marginal and Average x Curves. 6. Marginal Analysis and Fixed Costs. 7. Average vs. Marginal Figures in Business Practice. 8. Averages as Approximations to Marginal Figures. 9. First- and Second-Order Optimality Conditions. 10. Global, Local, and Corner Maxima. 11. The Second-Order Conditions and Stability.	
4 Maximization, Minimization, and Elementary Differential Calculus	42
1. Differential Calculus and Marginal Analysis. 2. Rules of Differentiation. 3. Geometric Interpretation: The First-Order Maximum Condition. 4. Nondifferentiability and Limited Variable Range Problems. 5. Second-Order Conditions of Maximization and Minimization. 6. Local and Global Optima. 7. Maximization in Many-Variable Relationships: Partial Differentiation. 8. Constrained Maxima: Lagrange Multipliers. 9. Some Economic Applications of the Differential Calculus.	

5	<i>Linear Programming</i>	70
	1. Some Standard Programming Problems. 2. Characteristics of Programming. 3. Algebra and Geometry. 4. Slack Variables, Feasible Solutions, and Basic Solutions. 5. The Basic Theorem and the Simplex Method. 6. The Initial Basic Solution, Feasibility, and Optimality Criteria. 7. The Next Basic Solution: The Pivoting Process. 8. Special Pivoting Rules. 9. Choosing the Pivot. 10. Illustration: Another Pivot Step. 11. Cases Where the Origin is not a Feasible Solution.	
6	<i>Duality</i>	103
	1. The Dual Problem. 2. Economic Interpretation of the Dual Problem. 3. Some Duality Theorems. 4. Duality and Decentralized Decision-Making. 5. Solution of the Primal and Dual Programs. 6. Another Look at the Simplex Method. Appendix A: On the Derivation of the Duality Theorems. Appendix B: The Initial Basic Solution and the "Feasibility Program."	
7	<i>Nonlinear Programming</i>	136
	1. Algebraic Notation and Example. 2. Geometric Representation: Nonlinear Constraints. 3. Geometry of Nonlinear Objective Functions. 4. Convex and Nonconvex Regions. 5. Concave and Convex (Objective) Functions. 6. Nonlinearities and the Basic Theorem of Linear Programming. 7. Methods of Nonlinear Computation. 8. The Kuhn-Tucker Theorems.	
8	<i>Integer Programming</i>	172
	1. Problems Where Noninteger Solutions Are Meaningless. 2. Nonconvex Feasible Region Problems. 3. Increasing Returns: The Fixed Charges Problem. 4. The Method of Solution. 5. Illustrations of the Integer Programming Computation. 6. The Dual Prices and Marginal Valuation.	
PART 2	MICROECONOMIC ANALYSIS	191
9	<i>Theory of Demand</i>	193
	1. Demand Curves. 2. Shifting Demand Curves: Demand Functions. 3. Elasticity: A Measure of Responsiveness. 4. Properties of the Elasticity Measure. 5. Utility Analysis of Demand. 6. Indifference Maps: Ordinal and Cardinal Utility. 7. Properties of Indifference Curves. 8. Price Lines: Consumer Income and Prices. 9. Equilibrium of the Consumer. 10. Responses to Price and Income Changes. 11. Income and Substitution Effects: The Slutsky Theorem. 12. Revealed Preference. 13. Revealed Preference and Index Numbers of Real Income. 14. Elementary Mathe-	

matics of Demand Analysis. 15. The n Commodity Slutsky Theorem and Revealed Preference.

10 On Empirical Determination of Demand Relationships **234**

1. Why Demand Functions? 2. Interview Approaches to Demand Determination. 3. Direct Market Experiments. 4. Standard Statistical Approaches. 5. Omission of Important Variables. 6. Inclusion of Mutually Correlated Variables. 7. Simultaneous Relationship Problems. 8. The Identification Problem. 9. Least Squares Bias in Simultaneous Systems. 10. Concluding Comments. Appendix: Notes on Identification and Simultaneous Equation Estimation. 1. *Some Identification Theorems.* 2. *Criteria for Evaluating Simultaneous Equation Estimation Methods.* 3. *Maximum Likelihood Method: General Description.* 4. *Advantages and Disadvantages of the Full-Information Maximum-Likelihood Method.* 5. *Structural Equations and Reduced-Form Equations: Definitions.* 6. *The Reduced-Form Method.* 7. *The Limited-Information Method.* 8. *The Method of Instrumental Variables.* 9. *The Method of Two-Stage Least Squares.*

11 Production and Cost **274**

1. Production, Inputs, and Outputs. 2. The Production Function. 3. Relative Input Levels and Production. 4. Diminishing Returns. 5. Returns to Scale. 6. Production Indifference-Curve Analysis. 7. Price Line and Expansion Path. 8. Linear Homogeneous Production Functions. 9. Derivation of Cost Curves. 10. Long Run and Short Run: Definitions. 11. Long-Run and Short-Run Average Costs. 12. Some Elementary Mathematics of Production Theory.

12 Linear Programming and the Theory of Production **294**

1. Why a Programming Reexamination of Production Theory? 2. An Alternative Linear Programming Diagram. 3. Illustrative Example. 4. The Feasible Region. 5. Representation of a Process. 6. Production Indifference Curves: Construction. 7. Some Properties of the Indifference Curves. 8. Profit Indifference Curves. 9. Graphic Solution of the Programming Problem. 10. Alternative Types of Solutions. 11. Cost Curves in Linear Programming. 12. Marginal, Total, and Average Input Products. 13. Conclusion.

13 The Firm and Its Objectives **319**

1. Alternative Objectives of the Firm. 2. The Profit-Maximizing Firm. 3. Application: Pricing and Cost Changes. 4. Extension: Multiple Products and Inputs. 5. Price-Output Determination:

Sales Maximization. 6. Advertising. 7. Choice of Input and Output Combinations. 8. Pricing and Changes in Fixed Costs and Taxes. 9. Satisficing and Behavior Analysis. 10. Profit and Sales Maximization: Sample Calculations.

14 Market Structure, Pricing, and Output

335

1. Classification of Market Structures. 2. The Profit-Maximizing Competitive Firm. 3. Equilibrium in the Competitive Industry. 4. Supply Curves: Some Comments. 5. Pure Monopoly. 6. Monopolistic Competition (Product Differentiation). 7. Monopsony. 8. Remarks on Discriminating Monopoly. 9. Bilateral Monopoly. 10. Oligopolistic Interdependence. 11. Stability of Oligopoly Arrangements: Kinked Demand Curves. 12. Reaction Curves and Oligopolistic Pricing. 13. Monopoly, Duopoly, and Discrimination: Elementary Mathematical Analysis.

15 General Equilibrium and the Theory of Money

362

1. Interdependence in the Economy: Substitutes and Complements. 2. Equations of General Equilibrium. 3. The Redundant Equation: Walras' Law. 4. Pitfalls in Determination of the Price Level. 5. The Real Balance Effect. 6. Comparative Statics: General Equilibrium Analysis. 7. Optimal Cash Balances.

16 General Equilibrium and Welfare Economics

379

1. Resource Allocation and General Equilibrium. 2. Marginal Rules for Optimal Resource Allocation. 3. Optimal Distribution of Products Among Consumers. 4. Optimal Use of Resources in Producing Given Outputs. 5. Marginal Rule for Optimal Output Levels. 6. An Optimal Price System. 7. Pure Competition and Monopoly. 8. Centralized Planning Without Central Direction. 9. External Economies and Diseconomies of Production and Consumption. 10. Some Standard Theorems of Welfare Economics. 11. Criteria for Welfare Judgments. 12. A Theorem on Democratic Group Decisions. 13. Concluding Remarks.

17 Theory of Distribution

410

1. Inputs in Fixed Supply. 2. Backward-Rising Input Supply Curves. 3. Labor Supply Institutions: Keynes' Hypothesis. 4. Unions as Monopolies: Alternative Union Goals. 5. Demand for Inputs: Marginal Productivity. 6. Demand for Heterogeneous Inputs: Differential Rents. 7. Summary: Outline of a Theory of Distribution. 8. A Macroeconomic Model of Distribution. 9. The Constancy of Labor's Share. 10. The Adding-Up Controversy.

18 Theory of Capital

431

1. Origins of Capital Theory. 2. The Meaning of "Capital" and "Investment." 3. Neoclassical Interest Theory: Introduction. 4. Supply of Capital Resources: Time Preference. 5. Demand for

Capital Resources: Roundabout Production Processes. 6. Digression on Marshallian Interest Theory. 7. Attempts to Measure Capital: Average Periods. 8. The Point-Input Point-Output Case. 9. Discounting and Present Value. 10. Continuous Compounding and Discounting. 11. Discount Rate and Interest Rate: Their Meaning. 12. The Optimal Length of an Investment: The Jevons Formula. 13. Comparative Statics: Effects of an Interest-Rate Change. 14. Comparative Statics: The Ricardo Effect.

19 Capital Budgeting **458**

1. Determinants of Investment: General. 2. The Standard Investment Criteria: Preliminary Comments. 3. Payout Period. 4. Marginal Efficiency of Investment. 5. Discounted Present Value vs. Marginal Efficiency. 6. Illustration: Use of the Discounted Present Value Criterion. 7. Indivisibility, Interdependence, and Capital Rationing Problems. 8. Risk and the Investment Decision. 9. Financing Investments: Alternative Methods. 10. On Optimal Financial Policy. 11. The Cost of Capital. 12. Concluding Comment. Appendix: Illustrative Probabilistic Calculation. *Replacement of Items Which Fail.*

PART 3 RECENT DEVELOPMENTS IN MATHEMATICAL ECONOMICS **501**

20 Input-Output Analysis **503**

1. The Economic Problem and the Assumptions. 2. The Mathematics. 3. A Dynamized Input-Output Model. 4. Some Theorems of Input-Output Analysis.

21 Activity Analysis and General Equilibrium **515**

1. The Existence and Uniqueness Problems. 2. Solution of the Existence Problem. 3. Solution of the Uniqueness Problem. 4. The Von Neumann Model of an Expanding Economy. 5. Activity Analysis and Welfare Economics. 6. Dual Prices and Decentralized Decision Making. 7. Integer Programming and Welfare Economics.

22 Neumann-Morgenstern Cardinal Utility **536**

1. Utility, Risk, and Game Theory. 2. Classes of Measures and Their Strength. 3. Construction of an N-M Index. 4. Expected Utility vs. Expected Payoff. 5. Psychological Premises Behind the Prediction. 6. N-M vs. Neoclassical Cardinal Utility. Appendix: The Psychological Premises and the Index.

23 Game Theory **553**

1. Taking Account of Competitive Decisions. 2. The Zero-Sum, Two-Person Game. 3. Maximin and Minimax Strategies. 4. Equilibrium (Saddle) Points. 5. Geometry of Equilibrium

Points: Saddle Points. 6. Payoff Matrices Without Equilibrium Points. 7. Mixed Strategies. 8. Optimal Mixed Strategies and the Saddle-Point Theorem. 9. Strategy; the Extensive and Normal Form of a Game. 10. Two-Person, Nonconstant-Sum Games. 11. n -Person Games: Some Concepts.

24 Decision Theory

574

1. The Subject Matter of Decision Theory. 2. Some Proposed Decision Rules. 3. Geometric Interpretation of the Decision Rules. 4. Axiomatization. 5. Neumann-Morgenstern Utility and the Bayes Criterion. 6. Decision Theory and the Foundations of Statistics.

PART 4 POSTSCRIPT ON COMPUTERS

593

25 Observations on Electronic Computers

595

1. Problems Suited for Machine Computation. 2. Components, Computer Types, and Prices. 3. Programming Languages, Compilers, and Other Aids. 4. How Does It Work?

ANSWERS TO PROBLEMS

ÍNDICE

	<i>Págs.</i>
INTRODUCCIÓN.....	7
G. MONTERO GONZÁLEZ, F. BRAVO OVIEDO Y F.J. SILVA-PANDO: NOTAS SOBRE INVESTIGACION FORESTAL: UNA PERSPECTIVA SELVÍCOLA Y DE GESTIÓN	9
CONFERENCIAS Y PONENCIAS	
E. ROJAS BRIALES: LOS RETOS DE LA HUMANIDAD ANTE LA PERSPECTIVA DE 2050 Y LOS BOSQUES	19
M ^a . GAFO GÓMEZ-ZAMALLOA: POLÍTICA FORESTAL Y DESARROLLO RURAL: VISIÓN DESDE LA UE	29
P. CAMPOS PALACÍN: RENTA AMBIENTAL DEL MONTE.....	35
J.A. VEGA HIDALGO: NUEVOS RETOS Y OPORTUNIDADES DE MEJORA EN LA LUCHA CONTRA INCENDIOS FORESTALES Y SUS CONSECUENCIAS	73
M.M ^a . RUIZ URRESTARAZU: NOMBRES Y PAISAJE	97
F. SEVILLA MARTÍNEZ: LA PREDICCIÓN EN SISTEMAS COMPLEJOS: CIENCIA Y APLICACIÓN PRÁCTICA.....	111
F. BRAVO OVIEDO: ¿SE PUEDE GENERAR CONOCIMIENTO MEDIANTE LA GESTIÓN ADAPTATIVA PARA FUNDAMENTAR UN CAMBIO DE PARADIGMA DE LA SELVICULTURA?.....	139
P. FERNÁNDEZ REBOLLO, M ^a .D. CARBONERO MUÑOZ Y A. GARCÍA MORENO: CONTRIBUCIÓN DE LA GANADERÍA EXTENSIVA AL MANTENIMIENTO DE LAS FUNCIONES DE LOS ECOSISTEMAS FORESTALES	147
R. SIERRA DE GRADO: MEJORA GENÉTICA: LO QUE EL VIENTO NOS TRAERÁ	163
J. PEMÁN GARCÍA: LECCIONES APRENDIDAS Y TAREAS PENDIENTES EN LA ACTIVIDAD REPOBLADORA Y VIVERÍSTICA	177

F. TORRENT BRAVO: REFLEXIONES SOBRE LA GESTIÓN DE PESCA DEPORTIVA ACTUAL EN ESPAÑA	197
C. MARTÍNEZ SANTA-MARÍA: EL AGUA EN EL AULA: ¿CÓMO ENSEÑAR SU NUEVA DIMENSIÓN?.....	205
J. DE LAS HERAS IBÁÑEZ: ¿QUÉ HACER DESPUÉS DEL FUEGO? PRINCIPALES RETOS Y ALGUNAS RESPUESTAS.....	213
C. HERNANDO LARA: PREVENCIÓN DE INCENDIOS FORESTALES: ¿QUÉ ESTUDIAMOS? ¿CÓMO TRANSFERIMOS EL CONOCIMIENTO?.....	237
J.J. DIEZ CASERO: PATOLOGÍAS FORESTALES Y CAMBIO GLOBAL: GLOBALIZACIÓN, CAMBIO CLIMÁTICO Y CUESTIONES LEGALES.....	249
R. ZAS ARREGUI Y L. SAMPEDRO PÉREZ: RESISTENCIA DE LOS PINOS A PLAGAS Y ENFERMEDADES: NUEVAS OPORTUNIDADES DE CONTROL FITOSANITARIO	259
A. ROJO ALBORECA: EL RETO DE LA ORDENACIÓN DE LOS MONTES PRIVADOS EN ESPAÑA	275
M. PIQUÉ NICOLAU: PLANIFICACIÓN FORESTAL EN ESPACIOS NATURALES PROTEGIDOS: HERRAMIENTAS INTEGRADORAS EN UN CONTEXTO DE CAMBIO .	299
F. DE JUANA ARANZANA: GESTIÓN DE ZONAS VERDES URBANAS Y PERIURBANAS PARA LA CONSERVACIÓN DE LA BIODIVERSIDAD: EL CASO DE VITORIA-GASTEIZ..	313
A. VEGA CUETO, E. CANGA LIBANO, S. SÁNCHEZ GARCÍA, A. HEVÍA CABAL, I. FEITO DÍAZ, M ^a . MENÉNDEZ-MIGUÉLEZ, M. GONZÁLEZ-GARCÍA, C. MARTÍNEZ ALONSO Y J.P. MAJADA GUIJO: INNOVACIÓN DE PROCESOS Y PRODUCTOS EN EL SECTOR DE LA MADERA	323
J.I. FERNÁNDEZ-GOLFÍN SECO Y E. HERMOSO PRIETO: LAS NECESIDADES DE I+D+i Y DE FORMACIÓN DE LA INDUSTRIA PRIMARIA DE LA MADERA EN ESPAÑA	337
L. DÍAZ BALTEIRO: ASPECTOS ECONÓMICOS DEL RECURSO MICOLÓGICO. IMPLICACIONES PARA LA GESTIÓN FORESTAL	345
J. PICOS MARTÍN: INDUSTRIA FORESTAL Y MERCADO DE LA MADERA: NAVEGANDO EN LA TORMENTA.....	367
CONCLUSIONES DEL 6º CONGRESO FORESTAL ESPAÑOL	381
